

Danger Level 3 - Considerable

Fresh wind slabs: As a consequence of new snow and wind an unfavourable avalanche situation will prevail.

As a consequence of new snow and a strong southwesterly wind, wind slabs will form during the course of the night above approximately 2000 m. They can be released easily, or in isolated cases naturally. The avalanches in these regions are medium-sized and in many cases easily released.

In all aspects individual small gliding avalanches and moist snow slides are possible as a consequence of the rain. This applies on very steep slopes below approximately 2000 m.

The conditions are treacherous for ski touring and snowshoe hiking outside marked and open pistes. Apart from the danger of being buried, restraint should be exercised as well in view of the danger of avalanches sweeping people along and giving rise to falls.

Snowpack

Error: Línia desconeguda 621 en im_Gebiet!

Tendency

Wind and new snow to low altitudes: Further increase in danger of dry avalanches.

Danger Level 2 - Moderate

Tendency: Increasing avalanche danger

on Saturday 10 12 2022

Wind slab

2200m

Snowpack stability: **very poor**

Frequency: **some**

Avalanche size: **small**

Gliding snow

2300m

Snowpack stability: **very poor**

Frequency: **some**

Avalanche size: **small**

Fresh wind slabs require caution.

As a consequence of new snow and a strong southwesterly wind, small wind slabs will form during the course of the night above approximately 2200 m. They can be released easily. or in isolated cases naturally,. The avalanches in these regions are only small but very easily released.

In all aspects individual small gliding avalanches and moist snow slides are possible as a consequence of the rain. This applies on very steep slopes below approximately 2200 m.

Apart from the danger of being buried, restraint should be exercised in particular in view of the danger of avalanches sweeping people along and giving rise to falls.
