

Danger Level 1 - Low

Tendency: Increasing avalanche danger

on Monday 27 03 2023

A generally favourable avalanche situation will prevail.

As a consequence of falling temperatures the snowpack consolidated at the weekend. In all aspects a mostly favourable avalanche situation will prevail.

In steep terrain there is a danger of falling on the hard snow surface.

Snowpack

Some snow will fall on Sunday especially in the north.

The surface of the snowpack has frozen to form a strong crust and will hardly soften at all. The snowpack is largely stable and its surface has a strong melt-freeze crust.

In all regions less snow than usual is lying.

On shady slopes at low altitude no snow is lying. At intermediate and high altitudes there are 20 to 40 cm of snow, and even more in some localities.

On steep sunny slopes from a snow sport perspective, in most cases insufficient snow is lying.

Tendency

As a consequence of new snow and a sometimes strong wind from northwesterly directions, sometimes easily released wind slabs will form on Monday.
